And we are ready to help you pass 1z0-1056-23 exam with our high-efficient exam materials by your first attempt, After the completion of 1z0-1056-23 Oracle Financials Cloud: Receivables 2023 Implementation Professional exam you will be able to become Oracle **Exam 1z0-1056-23 Quick Prep** certified that will opens a gateway of better employment opportunities for you in the industry.

NEW QUESTION: 1Which feature is described below:You can use the ___ to reduce the number of duplicate blocks of data in storage, you can store much more data in a given amount of storage capacity than was possible in previous releases that used Single Instance Storage (SIS) or NTFS file system compression.**A.** iSCSI Target Server**B.** iSCSI Target Boot**C.** Data Deduplication role service**D.** Multiterabyte Volumes**Answer: C**
Explanation:Explanation/Reference:Explanation:By using Data Deduplication, general purpose file servers can typically reduce storage capacity utilization by a 2:1 ratio (for example, files that previously used 1 TB would use 500 GB after deduplication). Servers that host virtualization data (such as VHD files) often reduce storage capacity utilization by a 20:1 ratio, which reduces 1 TB of data to 50 GB.

NEW QUESTION: 2Which statement is correct concerning the trusted network detection (TND) feature?**A.** The Cisco AnyConnect 3.0 Client supports TND on Windows, Mac, and Linux platforms.**B.**

With TND, one result of a Cisco Secure Desktop basic scan on an endpoint is to determine whether a device is a member of a trusted or an untrusted network.**C.** When the user is inside the corporate network, TND can be configured to automatically disconnect a Cisco AnyConnect session.**D.** If enabled, and a CSD scan determines that a host is a member of an untrusted network, an administrator can configure the TND feature to prohibit an end user from launching the Cisco AnyConnect VPN Client.**Answer: C**Explanation:Explanation

http://www.cisco.com/en/US/docs/security/vpn_client/anyconnect/anyconnect25/administration/guide/ac03features.htmlTrusted Network DetectionTrusted Network Detection (TND) gives you the ability to have AnyConnect automatically disconnect a VPN connection when the user is inside the corporate network (the trusted network) and start the VPN connection when the user is outside the corporate network (the untrusted network). This feature encourages greater security awareness by initiating a VPN connection when the user is outside the trusted network.If AnyConnect is also running Start Before Logon (SBL), and the user moves into the trusted network, the SBL window displayed on the computer automatically closes.TND does not interfere with the ability of the user to manually establish a VPN connection. It does not disconnect a VPN connection that the user starts manually in the trusted network. TND only disconnects the VPN session if the user first connects in an untrusted network and moves into a trusted network. For example, TND disconnects the VPN session if the user makes a VPN connection at home and then moves into the corporate office.Because the TND feature controls the AnyConnect GUI and automatically initiates connections, the GUI should run at all times. If the user exits the GUI, TND does not automatically start the VPN connection.You configure TND in the AnyConnect profile. No changes are required to the ASA configuration.

NEW QUESTION: 3Given a packet capture of the following scan: Which of the following should MOST likely be inferred on the scan's output?**A.** 192.168.1.55 is hosting a web server.**B.** 192.168.1.55 is a file server.**C.** 192.168.1.55 is a Linux server.**D.** 192.168.1.115 is hosting a web server.**Answer: B**
