**NEW QUESTION:** 1Which two statements about private VLANs are true? (Choose two.)**A.** Only one isolated VLAN can be mapped to a primary VLAN.**B.** Multiple isolated VLANs can be mapped to a primary VLAN.**C.** Multiple community VLANs can be mapped to a primary VLAN.**D.** Only one community VLAN can be mapped to a primary VLAN.**Answer: A,C****Explanation:**Explanation/Reference:  
Explanation:An isolated VLAN is a secondary VLAN that carries unidirectional traffic upstream from the hosts toward the promiscuous ports. You can configure only one isolated VLAN in a PVLAN domain. An isolated VLAN can have several isolated ports. The traffic from each isolated port also remains completely separate. Only one isolated VLAN can be mapped under a given primary VLAN. A community VLAN is a secondary VLAN that carries upstream traffic from the community ports to the promiscuous port and to other host ports in the same community.

You can configure multiple community VLANs in a PVLAN domain. The ports within one community can communicate, but these ports cannot communicate with ports in any other community or isolated VLAN in the private VLAN. Reference:

**NEW QUESTION: 2** Which two statements are true about Oracle Managed Files (OMF)? (Choose two.)  
**A.** OMF cannot be used in a database that already has data files created with user-specified directions.  
**B.** OMF can be used with ASM disk groups, as well as with raw devices, for better file management.  
**C.** OMF may affect the location of the redo log files and archived log files.  
**D.** OMF automatically creates unique file names for table spaces and control files.  
**E.** The file system directories that are specified by OMF parameters are created automatically.  
**Answer: C, D**  
**Explanation:** Explanation D: The database internally uses standard file system interfaces to create and delete files as needed for the following database structures: Tablespace, Redo log files, Control files, Archived logs, Block change tracking files, Flashback logs, RMAN backups.  
**Note:** \* Using Oracle-managed files simplifies the administration of an Oracle Database. Oracle-managed files eliminate the need for you, the DBA, to directly manage the operating system files that make up an Oracle Database. With Oracle-managed files, you specify file system directories in which the database automatically creates, names, and manages files at the database object level. For example, you need only specify that you want to create a tablespace; you do not need to specify the name and path of the tablespace's datafile with the DATAFILE clause.
