NEW QUESTION: 1

Which of the following statements are FALSE regarding expected monetary value analysis (EMV)?

- A. EMV is a tool/ technique of Qualitative Risk Analysis
- B. EMV is a statistical concept that calculates the average outcome of project outcomes based on various assumptions and scenarios
- C. EMV is technique for measuring the performance of work and used to establish the performance measurement baseline
- D. Decision tree analysis is a type of EMV analysis
- E. EMV is calculated by multiplying the value of each possible outcome by its probability of occurrence, and summing them together

Answer: C

NEW QUESTION: 2

You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com that contains the users shown in the following table.

You create and enforce an Azure AD Identity Protection sign-in

risk policy that has the following settings:

- * Assignments: Include Group1, Exclude Group2
- * Conditions: Sign in risk of Low and above
- * Access: Allow access, Require password multi-factor authentication

You need to identify how the policy affects User1 and User2. What occurs when each user signs in from an anonymous IP address? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

NEW QUESTION: 3

Your network contains an Active Directory domain named contoso.com. All user accounts are in an organizational unit (OU) named Employees.

You create a Group Policy object (GPO) named GP1. You link GP1 to the Employees OU.

You need to ensure that GP1 does not apply to the members of a group named Managers.

What should you configure?

- A. The WMI filter for GP1
- B. The Block Inheritance option for Employees
- C. The Security settings of Employees
- D. The Security settings of GP1

Answer: D

Explanation:

Explanation/Reference:

Explanation:

Set Managers to - Members of this security group are exempt from this Group Policy object.

Security settings.

You use the Security Settings extension to set security options for computers and users within the scope of a Group Policy object. You can define local computer, domain, and network security settings.

Figure below shows an example of the security settings that allow everyone to be affected by this GPO except the members of the Management group, who were explicitly denied permission to the GPO by setting the Apply Group Policy ACE to Deny. Note that if a member of the Management group were also a member of a group that had an explicit Allow setting for the Apply Group Policy ACE, the Deny would take precedence and the GPO would not affect the user.

NEW QUESTION: 4

a network design team has mandated that IP-only routing protocols be used in the network.

Which two routing protocols will they want to use? (Choose two.)

- A. RIP
- B. IS-IS
- C. BGP
- D. OSPF
- E. EIGRP

Answer: D,E
