Answer: D

NEW QUESTION: 2Drag and drop each description from the left into the matching protocol category on the right.
Select and Place:
Answer: Explanation:

NEW QUESTION: 3
ã, ²ãf¼ãf ä¼šç¼ã • ã€•ãf-ã, ñãfñãf¼4ã •®ãf|ãf¼ã, ¶ãf¼ã •"é€šä¿;ã•™ã,

target throughout its lifetime. Different UDP flows have different source IP addresses and ports, so they can be routed to different targets. An Auto Scaling group contains a collection of Amazon EC2 instances that are treated as a logical grouping for the purposes of automatic scaling and management. An Auto Scaling group also enables you to use Amazon EC2 Auto Scaling features such as health check replacements and scaling policies. Both maintaining the number of instances in an Auto Scaling group and automatic scaling are the core functionality of the Amazon EC2 Auto Scaling service. The size of an Auto Scaling group depends on the number of instances that you set as the desired capacity. You can adjust its size to meet demand, either manually or by using automatic scaling. An Auto Scaling group starts by launching enough instances to meet its desired capacity. It maintains this number of instances by performing periodic health checks on the instances in the group. The Auto Scaling group continues to maintain a fixed number of instances even if an instance becomes unhealthy. If an instance becomes unhealthy, the group terminates the unhealthy instance and launches another instance to replace it.
