- D. 15 Mbps.

Answer: A

NEW QUESTION: 2

The data-vault is an object-orientated, time-based and uniquely

linked set of normalized tables that support one or more functional areas of business.

A. TRUE

B. FALSE

Answer: B

NEW QUESTION: 3

DRAG DROP

Your network contains an Active Directory domain named contoso.com. The domain contains four member servers named Server1, Server2, Servers, and Server4. All servers run Windows Server 2012 R2.

Server1 and Server2 are located in a site named Site1. Server3 and Server4 are located in a site named Site2. The servers are configured as nodes in a failover cluster named Cluster1. Cluster1 is configured to use the Node Majority quorum configuration.

You need to ensure that Server1 is the only server in Site1 that can vote to maintain quorum.

What should you run from Windows PowerShell?

To answer, drag the appropriate commands to the correct location. Each command may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

Explanation:

We remove Server2 from quorum vote by setting it's NodeWeight to 0.

NodeWeight settings are used during quorum voting to support disaster recovery and multi-subnet scenarios for AlwaysOn Availability Groups and SQL Server Failover Cluster Instances.

Example (Powershell)

The following example changes the NodeWeight setting to remove the quorum vote for the "AlwaysOnSrv1" node.

```
Import-Module FailoverClusters
$node = "AlwaysOnSrv1"
(Get-ClusterNode $node).NodeWeight = 0
```

NEW QUESTION: 4

In order to ensure the privacy and integrity of the data, connections between firewalls over public networks should use:

A. Screened subnets

- B. Encryption
- C. An encrypted Virtual Private Network
- D. Digital certificates

Answer: C

Explanation:

Virtual Private Networks allow a trusted network to communicate with another trusted network over untrusted networks such as the Internet.

Screened Subnet: A screened subnet is essentially the same as the screened host architecture, but adds an extra strata of security by creating a network which the bastion host resides (often call perimeter network) which is separated from the internal network. A screened subnet will be deployed by adding a perimeter network in order to separate the internal network from the external. This assures that if there is a successful attack on the bastion host, the attacker is restricted to the perimeter network by the screening router that is connected between the internal and perimeter network.

Digital Certificates: Digital Certificates will be used in the intitial steps of establishing a VPN but they would not provide the encryption and integrity by themselves.

Encryption: Even thou this seems like a choice that would include the other choices, encryption by itself does not provide integrity mechanims. So encryption would satisfy only half of the requirements of the question.
