NEW QUESTION: 1

In object-oriented programming, when all the methods of one class are passed on to a subclass, this is called:

- A. Inheritance
- B. Multiple Inheritance
- C. Forward chaining
- D. Delegation

Answer: A

Explanation:

In inheritance, all the methods of one class, called a superclass, are

inherited by a subclass. Thus, all messages understood by the superclass are understood by the subclass. In other words, the subclass inherits the behavior of the superclass.

*Answer Forward chaining is a distracter and describes data-driven reasoning used in expert systems.

*Multiple inheritance describes the situation where a subclass inherits the behavior of multiple superclasses.

*Answer delegation, is an alternative to inheritance in an object-oriented system. With delegation, if an object does not have a method to satisfy a request it has received, it can delegate the request to another object.
