#### **NEW QUESTION: 1**

What would cause a subset of Android users in the same security group to NOT be provisioned to ShareFile?

- A.** The administrator has NOT enabled the user provisioning setting within the ShareFile settings.
- B.** Users have NOT launched the ShareFile application.
- C.** Users have NOT logged on to Worx Home.
- D.** The administrator has NOT provisioned the user from the User Management Tool.

**Answer: B**

#### **NEW QUESTION: 2**

You have a consistent InnoDB backup created with mysqldump, the largest table is 50 GB in size.

You start to restore your backup with this command;

```
shell> mysql -u root -p < backup.sql
```

After 30 minutes, you notice that the rate of restore seems to have slowed down. No other processes or external factors are affecting server performance.

Which is the most likely explanation for this slowdown?

- A. Secondary indexes no longer fit into the buffer pool.
- B. InnoDB is doing CRC32 checks over the tablespace data as it grows.
- C. The MySQL server has stopped inserting data to check index consistency.
- D. InnoDB has filled the redo log and now must flush the pages.
- E. The MySQL server is taking a periodical snapshot of data so it can resume the restore if it is interrupted mid-way.

**Answer: C**

### NEW QUESTION: 3

A network engineer is configuring a switch for a multi-VLAN environment. The engineer wants to ensure that traffic from all VLANs can be received on a single interface. Which configuration should be used?

- A. Community ports
- B. Ethernet ports
- C. Promiscuous ports
- D. Isolate ports

**Answer: C**

Explanation:

Explanation

+ Promiscuous -- A promiscuous port belongs to the primary VLAN. The promiscuous port can communicate with all interfaces, including the community and isolated host ports, that belong to those secondary VLANs associated to the promiscuous port and associated with the primary VLAN.

+ Isolated -- An isolated port is a host port that belongs to an isolated secondary VLAN. This port has complete isolation from other ports within the same private VLAN domain, except that it can communicate with associated promiscuous ports

+ Community -- A community port is a host port that belongs to a community secondary VLAN. Community ports communicate with other ports in the same community VLAN and with associated promiscuous ports

### NEW QUESTION: 4

You need to manage a C7000 enclosure with HP OneView, but the

Virtual Connect modules in the enclosure do not meet the minimum firmware requirements. What should you do to manage the enclosure?

**A.** Replicate firmware from the Virtual Connect modules with the minimum supported firmware.

**B.** Update the Virtual Connect modules using the Virtual Connect Support Utility (VCSU) before adding the enclosure to HP OneView.

**C.** Upload the latest Virtual Connect firmware to the Onboard Administrator and let the Virtual Connect modules automatically update the firmware.

**D.** Add an enclosure to HP OneView so that the firmware will be automatically updated to the latest version.

**Answer: D**

Explanation:

HP OneView consolidates configuration, firmware management, backup/restore, and monitoring functions which were provided by separate tools in the Virtual Connect management environment. HP OneView replaces Virtual Connect Manager and Virtual Connect Enterprise Manager when the enclosure is imported into HP OneView. Virtual Connect Manager is no longer available and cannot be logged into once the enclosure is managed by HP OneView.

Incorrect:

Not D: HP OneView makes it easy to manage firmware reliably and quickly across your data center. It replaces separate tools such as the Virtual Connect Support Utility (VCSU) for managing Virtual Connect firmware.
