Contemporarily, competence far outweighs family [PL-100](#) backgrounds and academic degrees, So you can also join them and learn our study materials.

NEW QUESTION: 1 A. Option B B. Option A C. Option D D. Option C
Answer: D Explanation: Here we see that the host is able to ping its own loopback IP address of 127.0.0.1 and its own IP address of 10.0.0.35, so we know that the NIC is functioning and that the host's TCP/IP stack is OK. However, it is not able to ping the IP address of its local default gateway, so we know that there is a local cabling problem between the switch and the router.

NEW QUESTION: 2 Which two features are required to implement a Layer 3 VXLAN gateway on the Cisco Nexus 5600 Series platform? (Choose two.)
A. feature nv overlay B. feature mpls C. feature eigrp D. feature vn-segment-vlan-based E. feature lldp
Answer: A, D

NEW QUESTION: 3When performing the daily review of the system vulnerability scans of the network Joe, the administrator, noticed several security related vulnerabilities with an assigned vulnerability identification number. Joe researches the assigned vulnerability identification number from the vendor website. Joe proceeds with applying the recommended solution for identified vulnerability. Which of the following is the type of vulnerability described?**A.** ID**S****B.** Network based**C.** Host based**D.** Signature based**Answer:** **D****Explanation:** A signature-based monitoring or detection method relies on a database of signatures or patterns of known malicious or unwanted activity. The strength of a signature-based system is that it can quickly and accurately detect any event from its database of signatures. **Incorrect Answers:** **A.** A network-based IDS (NIDS) watches network traffic in real time. It's reliable for detecting network-focused attacks, such as bandwidth-based DoS attacks. **B.** An intrusion detection system (IDS) is an automated system that either watches activity in real time or reviews the contents of audit logs in order to detect intrusions or security policy violations. **C.** A host-based IDS (HIDS) watches the audit trails and log files of a host system. It's reliable for detecting attacks directed against a host, whether they originate from an external source or are being perpetrated by a user locally logged in to the host. **References:** Stewart, James Michael, CompTIA Security+ Review Guide, Sybex, Indianapolis, 2014, p. 21
