**Answer: C**

**NEW QUESTION: 3**

A company has a Windows Server 2008 R2 Hyper-V server environment. The environment is managed with Microsoft System Center Virtual Machine Manager (VMM) 2008 R2. You need to add a new dynamic virtual hard disk (VHD) to an existing virtual machine (VM).

What should you do?

- A.** Assign 4 GB of static memory to the VM.
- B.** Add a synthetic network adapter to the VM and select the Enable virtual network optimizations option.
- C.** Add a disk drive to the VM by using the Add ClusterSharedVolume PowerShell cmdlet.
- D.** Install the server application on a physical server.
- E.** Add a disk drive to the VM by using the iscsicli.exe command line tool.
- F.** Add an emulated network adapter to the VM and select the Enable spoofing of MAC addresses option.
- G.** Add a synthetic network adapter to the VM and select the Enable spoofing of MAC addresses option.
- H.** Assign 1 GB of startup RAM and 8 GB of maximum RAM to the VM.
- I.** Assign 1 GB of startup RAM and 4 GB of maximum RAM to the VM.
- J.** Add a disk drive to the VM by using the New-VirtualDiskDrive PowerShell cmdlet.
- K.** Install the server application in a VM with the latest supported integration components.
- L.** Add an emulated network adapter to the VM and select the Enable virtual network optimizations option.

**Answer: J**

Explanation:

To help you remember: virtual hard disk = New-VirtualDiskDrive PowerShell cmdlet

How to Add a Virtual Hard Disk to a Virtual Machine

Applies To: Virtual Machine Manager 2008, Virtual Machine

Manager 2008 R2, Virtual Machine Manager 2008 R2 SP1 You can

add a virtual hard disk to an IDE device or a SCSI adapter with the following procedure. By default, any hardware profile includes a built-in IDE drive. You can add and configure up to four virtual SCSI adapters to a virtual machine. Use this procedure when modifying a hardware profile or configuring hardware profile settings from the New Template Wizard or the New Virtual Machine Wizard.

#### Note

In VMM 2008 R2, if a virtual machine is deployed on a host that is using the Hyper-V implementation of the SCSI controller, you can add or remove a virtual hard disk or pass-through disk from the SCSI controller while the virtual machine is running. On all other storage configurations, you must stop the virtual machine before adding or removing a disk.

To add a virtual hard disk

To add a virtual hard disk, take one of the following actions:

To add a virtual hard disk to an IDE bus, in the left pane, under Bus Configuration, click IDE Devices, and then click VHD on the top toolbar.

To add a virtual hard disk to a SCSI bus, click SCSI Adapter on the top toolbar and then click VHD on the toolbar.

Under Channel, select a channel to attach to this virtual hard disk.

Under Virtual Hard Disk, select one of the following options:

Use an existing virtual hard disk. Select this option if you want to add an existing virtual hard disk to the virtual machine. Click Browse to display the Select a virtual hard disk dialog box, and then select the virtual hard disk that you want to use from the list that displays on this screen.

Create a new virtual hard disk (available on the hardware profile for a virtual machine). Select this option if you want to create a new virtual hard disk. Modify the values for the following options:

Type. Select Dynamic (default) or Fixed.

Size. Specify, in gigabytes (GB), the size of a fixed virtual hard disk or the maximum size of a dynamically expanding virtual hard disk.

Destination file name. Specify the name of a new virtual hard disk.
